

Lab 1: Requirements Elicitation

1. Problem Statement

Even while hiking is becoming more and more popular in Singapore, and the government has big ambitions to build more hiking trails and park connectors, there is still a big lack of a centralized platform to help nature lovers keep track of their hikes. Currently, there is no specific tool to assist users in keeping track of and organizing the trails they have visited, which makes it more difficult for them to efficiently plan, relive and share their outdoor experiences. The lack of an all-inclusive trail tracking platform restricts users' ability to interact more intimately with Singapore's hiking terrain and impedes the development of an informed and connected community of outdoor lovers.

2. Target User of Website

The target users of our website would be nature enthusiasts/hikers, fitness enthusiasts, tourists and community of outdoor lovers.

3. Functional Requirements

1. Landing Page

- 1.1 The User may click on the Home button to return to the Home page.
- 1.2 The User may click on the Trails button to access the Trails page.
- 1.3 The User may click on the Login button to access the Login page.
 - 1.3.1 If they are already logged in, Login will be replaced by a Profile button, which the User may click on to access My Hiking Trails or Account Settings.

2. Login Page

2.1 Login Page

- 2.1.1 The User must enter their Email and Password into their respective fields to log into their user account.
- 2.1.2 The User may click on the Forget Password button for Forget Password Modal to appear.

2.2 Forget Password Modal

- 2.2.1 The User must enter their User Account Email and click Next to receive an Email Link for Password Reset

2.3 Signup Button

- 2.3.1 The User may click on the Sign Up button to create a new user account

3. Registration Page

- 3.1 The User must enter an email address and password that will be used to login to their new user account.
 - 3.1.1 The User must enter their email address in the respective text field.

- 3.1.1.1 The email address must point to a valid address and domain (an example of a valid domain is *@gmail.com*).
- 3.1.2 The User must enter a new password in the respective text field.
 - 3.1.2.1 The password must be text of at least 8 characters and less than 30 characters.
 - 3.1.2.2 The password must have a mixture of uppercase, lowercase, numbers, and special symbols.
- 3.1.3 The User must be able to click on the Next button to generate a One-Time Password that will be sent to their email address to complete the signup process.

4. Account Settings Page

- 4.1 The User must be able to edit their username.
 - 4.1.1 The new username must be at least 8 characters and less than 30 characters.
 - 4.1.2 The new username must not already exist in the system.
- 4.2 The User must be able to edit their password.
 - 4.2.1 The new password must be at least 8 characters and less than 30 characters.
 - 4.2.2 The new password must have a mixture of uppercase, lowercase, numbers, and special symbols.
- 4.3 The User must be able to edit their email.
 - 4.3.1 The new email must point to a valid address and domain (an example of a valid domain is *@gmail.com*).
- 4.4 The User must be able to link their Strava account.
 - 4.4.1 The new Strava account must point to a valid account.

5. Trails Page

- 5.1 The User must be able to view a catalog of hiking trails.
- 5.2 The User must be able to query the system to search for a trail by name.
 - 5.2.1 The results for a query must return all relevant trails by name.
- 5.3 The User must be able to filter trails by region.
 - 5.3.1 The results for a filter must return all relevant trails by region.
- 5.4 The User must be able to click on a trail to retrieve information about the trail, including a description, location, reviews, and YouTube vlogs.

6. Events Page

- 6.1 The User must be able to view a catalog of hiking events.
- 6.2 The User must be able to query the system to search for an event by name.
 - 6.2.1 The results for a query by name must return all relevant events by name.
 - 6.2.2 The results for a query by location must return all relevant events by location.

6.3 The User must be able to select a desired event to view its general information, map location, etc..

6.3.1 The User may click on the JOIN button to sign up for an event.

7. User Hiking Profile Page

7.1 The User must be able to view their hiking data retrieved via the Strava API and the trails that they have completed.

7.2 The User must be able to view the trails they have saved or want to go to.

4. Non-Functional Requirements

1. Usability

1.1 First-time users should be able to enter a simple search query after going through the onboarding process.

1.2 When the User uses the website on different devices, the UI must adapt to the screen size of the user device accordingly.

1.3 The User must be able to switch between light mode and dark mode.

2. Performance

2.1 When the User clicks on a new page, it should load within 10 seconds.

2.2 When the User enters a new search query, the results should load within 10 seconds.

3. Reliability

3.1 The system must be accessible 24/7, with the exception of periods of maintenance and downtime.

4. Security

4.1 Any one User's profile must not be accessible by another user.

4.2 The User's personal information must not be accessible via the source code and must be stored securely within the database.

4.2.1 The User's login credentials must be encrypted within the database.

4.3 The credentials for the database must not be accessible via the source code and must be kept securely off-site.

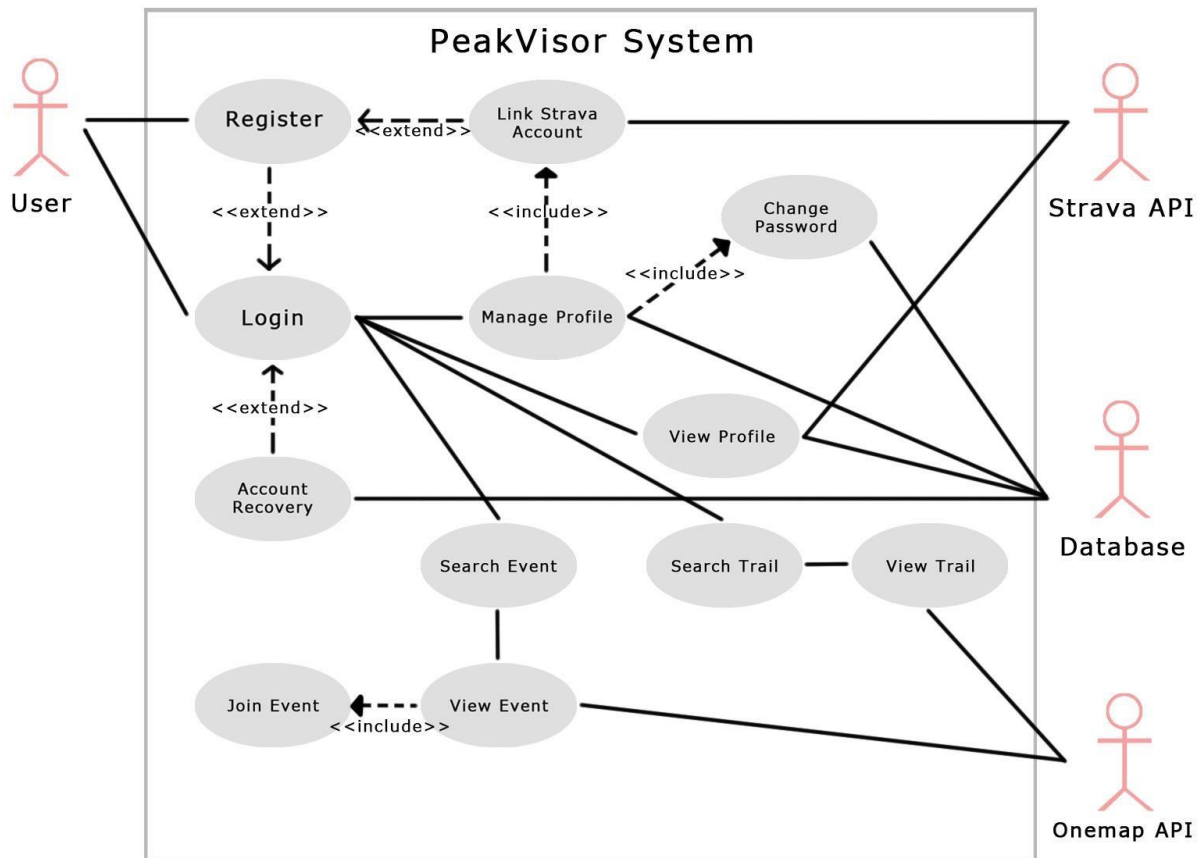

4.4 The database must be resilient against potential SQL injection attempts made through search queries issued by any User.

5. Data Dictionary

User account	A user account is a digital identity associated with an individual, created within a system or platform, and used to access its features and services. It typically includes a username and password, and may contain additional personal information and settings.
User Database	A user database is an organized set of data kept in a system that contains user information such as passwords, usernames and other profile information. It provides user authentication, access management and tailored interactions within the system.
Trail Location	Users can choose the location of the trail that they prefer to hike. They can either directly select the hiking trail, or find a hiking trail near their area.
Hiking Event	A hiking event is a scheduled outdoor activity that is usually organized by people, clubs, organizations, or businesses and involves walking or trekking along trails or roads in natural areas. These gatherings frequently seek to develop hiking enthusiasts' social relationships, encourage physical activity, and explore the surrounding area.
Trail video	Users can view available videos on the hiking trail location when they select the trail. Youtube API will provide the most viewed video of the hiking trail.
Estimated trail length	Trail length is the estimated distance required to be covered for a person to get from the starting point of the trail, to the end point of the trail. This can be calculated via OneMap.

Trail rating	<p>A scaling system implemented for users to rate and review their experience hiking this trail. 5 stars means the best experience while 1 star is the worst. The rating of a specific trail will be the average of all the users' ratings. The rating system will only be offered after the hike.</p>
One-Time Password (OTP)	<p>A six-digit number which will be sent to a user's email address or phone number via email or SMS for the user to log in the platform. An OTP will expire in 3 minutes and the user can request another OTP after 1 minute.</p>
Hiking Profile	<p>A list of user personal hiking information. This includes the list of previous hikes that they have done. Each hike will have a location, date, time spent and route via Strava API.</p>

6. Use-Case Diagram

7. Use-Case Descriptions

Use Case ID:	001		
Use Case Name:	Register		
Created By:	Jeannie Wong	Last Updated By:	Ben
Date Created:	30 January 2024	Date Last Updated:	5 February 2024

Actor:	User (Initiating Actor), System
Description:	Users visiting the website for the first time can register for a new account.
Preconditions:	The user must not have a user account tagged to their registering email address prior to the registration
Postconditions:	<p>The user has successfully registered for a user account in the website with a unique email address and password and their new user account is added into the system database.</p> <p>OR</p> <p>The user is notified of the reason(s) why the registration of the account is unsuccessful.</p>
Priority:	High
Frequency of Use:	High
Flow of Events:	<ol style="list-style-type: none"> 1. On the landing page, the User clicks on the Login button. 2. The System will direct the user to the login page.

- | | |
|--|---|
| | <ol style="list-style-type: none">3. A new User will be redirected to the Registration Page 1 to register for a new user account.4. The User will enter a Name and valid email address for their new user account in the respective text fields.5. The User will click "Get OTP".6. The System queries the database to check if an identical email address already exists.7. The System will automatically generate a One-Time Password (OTP), which is sent to the User's email address.8. The User enters OTP into the OTP field and clicks Next.9. The System verifies the correctness of the OTP.10. The User clicks Next and gets redirected to Registration Page 2.11. The User will enter a valid Password into Password Field.12. The System will verify if the password satisfies all the requirements.13. The User will re-enter the password to confirm their password.14. The User will click on the "Sign Up" button to complete the User Account Registration.15. Upon verification, the System will store the new user account in the database securely.16. Once registration is successful, the System will automatically help the User to log into their account. |
|--|---|

Alternative Flows:	<p><u>AF-S5: The user enters an email address that has already been registered.</u></p> <ol style="list-style-type: none"> 1. The system will display the message “Email address has already been registered, please enter another email address.” under the email address field. 2. The system will return to Step 5 and wait for the user to enter another email address. <p><u>AF-S8: The user inputs an incorrect OTP</u></p> <ol style="list-style-type: none"> 1. The system will display the message “Incorrect OTP! Please try again.” at the top of the registration form. 2. The system will re-generate a new OTP and send it to the user’s mobile phone number or email address. 3. The system will return to step 8 and wait for the user to enter the correct OTP.
--------------------	---

	<p><u>AF-S11: The user enters a password that does not satisfy all the requirements.</u></p> <ol style="list-style-type: none"> 1. The system will display the message “Password does not meet all the requirements, please try again!” under the password field. 2. The System will return to Step 11 and wait for the user to enter another password. <p><u>AF-S12: The user enters a mismatched password.</u></p> <ol style="list-style-type: none"> 1. The system will display the message “Passwords do not match, please try again!” below the password field. 2. The system will return to Step 12 and wait for the user to re-enter the password. <p><u>AF-S14: The user did not complete all of the input fields.</u></p> <ol style="list-style-type: none"> 1. When the user clicks on the “Sign Up” button, the system will display the message “Please check that all the fields are filled up.” at the top of the registration form. 2. The system will return to Step 14 and wait for the user to complete all remaining fields and click on the “Sign Up” button.
--	--

Exceptions:	<p><u>EX-1: The user did not receive the OTP in his email.</u></p> <ol style="list-style-type: none"> 1. The user can click on the “Resend OTP” button, made available after 1 minute. 2. Once the user clicks on the “Resend OTP” button, a new OTP will be generated. 3. The system will return to Step 8 and wait for the user to enter OTP again. <p><u>EX-2: The user requests for more than 3 OTP requests.</u></p> <ol style="list-style-type: none"> 1. The fourth time the user requests to generate a new OTP, the system will generate the message “Please try again with a different email.” at the top of the registration page. 2. The system will return to Step 4 and wait for the user to enter a different email.

- Login Page

The image shows a login page for 'PERUVISOR'. The left side has a green background with the 'PERUVISOR' logo (two stylized eyes) in the top left. The main heading 'Sign In' is in large white text. Below it are two white input fields: the first is labeled 'Email' and the second is labeled 'Password'. A dark green 'Sign In' button is positioned below the password field. At the bottom of the green section, the text 'No account yet?' is followed by a dark green 'Sign Up' button. The right side of the page features a large background image of the Marina Bay Sands hotel in Singapore at sunset, with a dark green circular icon containing a white 'L' in the top right corner.

A banner image showing three hikers (two women and one man) walking away on a forest path. The hiker on the left is wearing a red and black plaid shirt and a backpack. The hiker in the middle is wearing a green backpack. The hiker on the right is wearing a blue shirt and a blue backpack. The background is a lush green forest with sunlight filtering through the trees.
